Sundance Square

Information Security Analyst

Fort Worth, Texas

Information Security Analyst Overview

Sundance Square has become a model for urban development, creating a large cultural and economic impact on the city of Fort Worth.

As the Information Security Analyst, you will report directly to the President of Sundance Square Management.

The Information Security Analyst Role

The Information Security Analyst is responsible for identifying, monitoring, evaluating, and resolving IT system issues, as well as support the assessment and mitigation of information technology and security vulnerabilities. The Information Security Analyst will also verify that security and compliance standards are integrated into the overall IT environment, and track remediation and mitigation efforts.

The Information Security Analyst will develop a workflow process, conduct vulnerability assessments, document security issues, and evaluate technology vendors security processes.

In addition to performing the key responsibilities of this position, the Information Security Analyst must exemplify our values and guiding principles to ultimately ensure the fulfillment of our purpose.

In this role the Information Security Analyst will:

- Perform coordination of vulnerability assessment activities and develop vulnerability corrective action plans.
- Help build remediation standards and procedures relating to data misuse, disclosure, alteration, and destruction.
- Review operating system, application, and network security vulnerabilities and document the findings.
- Develop reports that detail existing vulnerabilities, potential risks, and mitigation strategies.
- Communicate reporting metrics to senior leaders.
- Stay current on IT security trends and news.
- Develop company-wide best practices for IT security and conducts security awareness training.
- Understand firewalls, SIEM, EDR, and cloud concepts.
- Investigate security incidents and supports response.
- Provide end-user support as requested.

Required Knowledge, Skills and Abilities (Qualifications)

- 2-5 years' experience or demonstrable experience in information security
- At least 1-year prior experience using vulnerability scanning tools and minor scripting development
- Strong background in patching and remediation tracking
- Solid understanding of data analysis, threat monitoring, and risk acceptance
- Independent problem-solving and decision-making capabilities
- Experience aligning to industry standards such as with ISO, NIST, and GDPR
- Exceptional written and verbal communications, including the ability to communicate and explain technical concepts in non-technical terms directly with senior executives
- Outstanding communication and interpersonal abilities
- Bachelor's degree in computer science, engineering, or relevant field
- Holds an active or associate CISSP, or similar certification
